## **DETAILED ACTION**

## Allowable Subject Matter

1. Claims 1-20 are allowed.

2. The following is an examiner's statement of reasons for allowance:

The claims are allowed over the cited prior art because none of the references teaches or discloses a circuitry configuration and function of a buck converter having a pair P 0 of switches, a filter inductor Lout, K other additional pairs, K input groups, K output groups, and in that the switches of these other K additional pairs are simultaneously controlled by the first and second complementary control signals forming, when the switch SB of the pair P 0 connected to the terminal B is set in the conducting state for a time Toff, a first network of capacitors connected between the terminal A and the terminal B, comprising the groups of input capacitors in series with the groups of output capacitors such that a group of input capacitors Gin i is in series, via its respective energy recovery inductor Lr i, with its respective group of output capacitors Gout\_i, and in that, when the switch SB of the pair P 0 connected to the input terminal B is set in the isolating state, SH being set in the conducting state, for a time Ton, these other K pairs of switches form a second network of capacitors, connected between the terminal A and the output filter inductor Lout, comprising the input group Gin 1 in parallel with the output group Gout K, in parallel with input capacitor groups in series with output capacitor groups such that an input capacitor group Gin i is in series with an output capacitor group Gout (i-1).
